

Your Partner for Dismantling, Logistics, and Sustainable PV Module Recycling

PVMRC actively supports solar park operators, EPC contractors, O&M service providers, PV module manufacturers, and solar installers with professional PV module disposal.

From Dismantling to Recycling

Discover our 360° service for decommissioning, repowering, logistics, and recycling of PV modules across Europe.

Dismantling of Solar Parks and Large PV Installations

On-site dismantling by experienced teams. Safe removal of PV modules, mounting structures, inverters, cabling, and transformers.

Repowering of PV Systems

We offer repowering services for solar park operators, EPC contractors, and O&M service providers. Our scope includes module replacement, professional installation, complete documentation, and compliance with all legal requirements.

Thermographic Drone Inspection

With thermographic drone inspections, we detect defects in solar parks precisely and quickly. This enables you to increase efficiency, enhance safety, and achieve maximum performance.

Professional Logistics Solutions

Palletizing, loading, and transport of PV modules with complete documentation, from the field to the final destination. Efficient coordination across Europe through our experienced logistics department.

PV Module Recycling

Professional recycling of PV modules in certified recycling facilities. You will receive complete disposal documentation from us. All legal regulations, standards, and requirements are met.

Full-Service PV Disposal Management

Comprehensive support for end-of-life PV modules. From dismantling and repowering to logistics, disposal, and recycling – everything from a single source with one central point of contact.

With PVMRC, the Cycle is Complete

Contact our specialists if you have project inquiries or are looking for customized solutions. We're here for you.
